# SWING FLOOD GATE:

DF-SW-FG

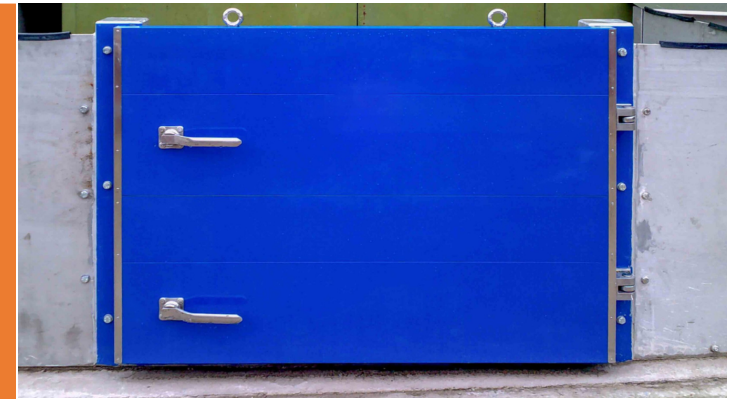

## Description

- Our swing-hinge flood gates are ideal for openings where there is a step or ramp. The aluminium construction results in a lightweight and easy to use gate that provides full flood protection.
- These flood gates are designed for extreme weather durability to give a lifetime of service; the custom gaskets are designed to reform after prolonged compression, the gates are lockable and have anti-theft and vandal resistant features.

DYNOFORCE

DF-SW-FG

- Swing-hinge flood gates provide either flooding protection or chemical containment in bunded areas. The gates are securely sealed with 2 or 3 lever type locking handles. The precision engineered hinges allow the gates to open the full 180° and this can be further extended to 270° with modification.

## Uses

- Pedestrian flood gates.
- Gateways in flood defense walls.
- Building openings where steps are allowed.

## DF-SW-FG

### Installation

- Single aluminum Swing-Hinged Gates are available up to 5 ft wide and 5.2 ft high.
- Double gates are available with demountable central posts for flood situations.
- Steel flood gates can be made to any size – our largest to-date is 21 ft wide by 14.4 ft high.

### Configuration

- Swing-Hinged Gates require a step to close against.
- Gates can be integrated into glass barrier systems.
- Gates can be integrated with lift-hinged vehicle gates or demountable barriers for increased flexibility.
